

# T-Control

## The Problem

Catheters are used at hospital and out-patients level for basic continence-related problems, but do not satisfy patients, health professionals or authorities 100%

- Linked to different illnesses and medical interventions
- Uncomfortable for patients decreasing quality of life and autonomy
- High risk of infections (high cost for public health and causing >14,000 death/year in Europe)
- Chronic incontinence due to continuous drainage
- Insertion and device management done incorrectly

## The Solution

First and only catheter addressing all the mentioned problems, thanks to a special valve integrated into the body of the catheter

- Freedom to patients (open/close urine flow, urinary collection bag usage according to personal needs)
- More control for nurses during the insertion process (easier and safer insertion controlling urine outflow)

## The Product

**T-Control** is a Foley catheter, which - based on patient needs- permits to close the flow of urine without the use of any collection bag. In case of necessity, it is also compatible with any type of collection bag for periods of need.

It has an integrated special valve that enhances aseptic insertion technique.

## Milestones

Founded  
2014

Patent approval  
2016 EU / 2018 US

Final prototype  
2017

Product  
manufacturing  
2018

Clinical validation  
2019

CE Mark/Market  
Launch  
2019-2020

## Key Metrics

€ 670 M (CAGR 5%)

Market size (EU & US)

€ 181 M (CAGR 5.8%)

Beachhead market  
(prostate hyperplasia, EU & US)

€ 19 M Expected minimum  
sales in 2020

60-75% Gross margin

2020 Break-even

€ 3.5 M Current valuation in  
the market

## Potential Market

Foley catheters used in EU & US: 219 M units/year

Europe 191.7 M units/year

USA 27.9 M units/year

Spain 11.5 M units/year

## Funding Goals

- 71% Clinical studies
- 21% Product manufacture
- 8% Registration
